

Thermal Imaging Camera

For Medical Application

It is a professional thermal imaging camera for medical application. Utilizing advanced detector, can take crisp thermal imaging for flowing crowds with accurate, non contact, non invasive method to visualize skin surface temperature difference, which is the ideal instrument of the frontline of defense for government and corporation in public and private sectors.

Features:

- New generation high performance IR detector 160x120 pixels 25 μm .: Improve image quality and increase thermal sensitivity.
- Crisp thermal images: Users can trace objects easier and rapidly with integrated images.
- Bright 3.5" Color LCD: Produce sharper and clearer images
- 50Hz Real-time Imaging: Smooth and crisp thermal images
- Automatic search and alarm: Indicate and trace the objects which their temperature is going beyond the defined value.
- Non contact monitoring: Operated without giving any inconvenience or panic to the flowing crowds
